## DETAILED ACTION

### ***Allowable Subject Matter***

Claims 13,16-19, and 21 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose, suggest, or teach the following limitation

"a delivering step of delivering, by the storage server, image data to the client terminal in IP-packet form, wherein the client terminal requests the image data by specifying a channel and a frame number, wherein in response to when an the storage server performs: a requesting step of requesting the web camera to deliver the second data representative of at least one of the images taken before the alarm occurred, and an alarm recording step of recording the second data from the rink buffer memory in a second recording channel storage area of the disk device with the second image quality along with time stamps without stopping the normal recording step, whereby the recorded second data has a higher frame rate than the first data, and a recording period of the second data and a recording period and part of the first data overlap in an overlapping period are and wherein in response to an instruction for seamless playback, a client terminal performs a reproduction step of receiving both of the first data and the second data of the overlapping period, selecting frames, frame by frame, from the first data and the second data, and reproducing the selected frames along with the time stamps of the selected frames as a continuous video, wherein the reproduction step repeats: a sub step of adding an elapsed time from a reproducing start time to a

reproduction reference time; a sub step of updating a reproducing memory which holds a latest acquired frame and a previous acquired frame for each of the first data and the second data received from the storage server, wherein the updating is performed when a time stamp of a latest acquired frame of either the first data or the second data indicates a time older than the reproducing reference time, by acquiring and receiving a next frame of the latest acquired frame with the older time stamp; and a sub step of comparing the time stamps of the previous acquired images of the first data and the second data to output either data as a reproducing data, having a newer time, of the first data and the second data, during reproduction of data representative of the imago at said same time, a reproduction stop of preferentially receiving, by a client terminal, the recorded second data, having a higher imago quality than the first data, rather than the first data, and seamlessly reproducing, by the client terminal, the first data and the second data along the time series when an instruction for seamless playback is received from a user.”

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
